Apex Systems

Enterprise architecture. Strong controls. Premium investment.

01 / Executive summary

Response to the same fictional procurement request: implement a customer-service platform for 250 agents, integrate CRM and ERP, migrate two million records, and provide secure operations and support for three years. The buyer seeks clear delivery, commercial and service commitments. All organizations, projects, assurance documents and references in this proposal are invented.

Understanding the requirement

The buyer needs a single view of service requests, reliable exchange with sales and finance systems, measurable migration acceptance and auditable access to customer information. The proposed scope and its limitations are set out below.

Proposed solution

The solution uses a modular API gateway, event-driven services and an offline retry queue for CRM and ERP integrations. Two connector prototypes will be demonstrated before build approval. PostgreSQL provides tenant isolation; Redis caches read-heavy views. Load tests target 1,000 concurrent agents and a 95th-percentile response below 500 ms. The design includes versioned REST APIs and a reconciliation dashboard for failed transactions.

02 / Delivery & commercials

Implementation and milestones

Delivery takes 16 weeks: discovery in weeks 1-3, build in weeks 4-10, migration in weeks 11-13 and acceptance in weeks 14-16. A delivery manager, two integration engineers, three application developers and a QA lead form the core team. The buyer supplies a product owner and test users. Acceptance requires 98% migration accuracy and closure of critical defects. A two-week contingency sits within the final phase; dedicated training capacity is not priced separately.

Commercial offer

Three-year total cost is USD 420,000, excluding taxes and buyer-side network upgrades.

Cost item	USD	Basis
Implementation	$180,000	One time
Subscription	$65,000	Each year x 3
Migration	$25,000	One time
Training	$20,000	One time
3-year total	$420,000	Excludes taxes

Assumptions and exclusions

Includes 250 named agents, two integrations and migration of two million records. Additional integrations cost USD 18,000 each. Subscription includes platform hosting and support. Renewal increases after year three are capped at 6% annually. Travel and buyer hardware are excluded.

03 / Assurance & service

Security and compliance

Controls include SAML SSO, role-based access, AES-256 storage encryption, TLS 1.3 transport and 365-day audit logs. A fictional independent control assessment AS-26-14 lists quarterly access reviews and annual penetration testing. This is a training claim, not a real certification. Recovery objectives are RPO 1 hour and RTO 4 hours, tested every six months. Data stays in the agreed region; a signed DPA and deletion certificate are proposed before production.

Support, experience and references

Support is available 24/7 for critical incidents, with a 30-minute response target and a named service manager. Nine comparable fictional projects were delivered in five years. Fictional references: Maple Freight (320 agents) and Cedar Utilities (210 agents). Reference contact details are intentionally omitted. The support SLA promises a response, not a guaranteed fix time. Monthly service reviews and quarterly resilience tests are included.

Risks and buyer dependencies

Buyer access to source systems, nominated subject-matter experts and timely test decisions are required. Claims in this proposal require verification before award. Highest three-year price in this cohort. Training capacity and resolution SLA need clarification.

Evidence limitations

This fictional proposal is not an independently verified audit or a real commercial offer. Supporting reference calls, assurance documents and contract terms are to be reviewed during due diligence. No real confidential supplier information is included.
